Bio

Dynamic and detail-oriented web developer, formerly an ESL teacher in South Korea, looking to work as a React / Javascript developer. Possesses a track record of collaborative development and meeting deadlines. Armed with an extensive understanding of the MERN stack, Redux, REST, and Sass / CSS. Regular participant and Github contributor in local web development meetups.

Recent Projects (visit danieljwagener.com for demos)

Geckrello (React, MongoDB, Node.js, Express, Redux, Sass, REST)

- Developed and deployed a full-stack Trello clone utilizing the MERN stack.
- Architected and planned the front-end with two other developers remotely through a Chingu Voyage software collaboration. Developed the codebase using Git workflow and then, after the other developers had to withdraw, single-handedly completed the project before the deadline. In the end, wrote more than 95% of the project's code.
- Upgraded the app to include a database and user authentication.

Calculator (React, Sass, Figma)

- Developed a project according to project specifications set by the freeCodeCamp curriculum.
- Exceeded those specifications by including a recursive algorithm to handle equations with nested parentheses.

Johns Creek Mapbox (Mapbox API, jQuery, Sass)

- Coded a project to dynamically display map locations based on user search input.
- Developed the app according to project specifications set by Chingu, met the deadline, and successfully gained admission into a Chingu Voyage collaboration program.

BlenderBottle (Bootstrap, Sass, jQuery)

- Designed a website utilizing advanced Bootstrap features (like modals and carousels) to capture users' attention.
- Completed as an assignment for Harvard's CS50 on edX.
